1-1/4" RADIAFLEX® RAYA Cable, A-series

- RADIAFLEX® functions as a distributed antenna to provide communications in tunnels, mines and large building complexes and is the solution for any application in confined areas.
- Slots in the copper outer conductor allow a controlled portion of the internal RF energy to be radiated into the surrounding environment. Conversely, a signal transmitted near the cable will couple into the slots and be carried along the cable length.
- RADIAFLEX® is used for both one-way and two-way communication systems and because of its broadband capability, a single radiating cable can handle multiple communication systems simultaneously.
- This RADIAFLEX® radiating cable utilize a low-loss cellular polyethylene foam dielectric and a smooth copper outer conductor which offers a superior electrical performance together with good bending properties.

Features / Benefits

- Broadband from 30 MHz to 2700 MHz
- Optimized for high frequencies and digital communication solutions
- Low coupling loss variation
- Ideally suited for any kind of tunnel applications

NOTES

- Coupling loss as well as longitudinal attenuation of RADIAFLEX® cables are measured by the free space method according to IEC 61196-4.

RAYA114-50CPR

1-1/4" RADIAFLEX® RAYA Cable, A-series

- Coupling loss values are measured with a dipole antenna.
- The best coupling loss values correspond to the spatial orientation of dipole antenna (radial orientation for the frequencies below 400 MHz / orthogonal orientation for the frequencies above 400 MHz) and the average values of all three spatial orientations (radial, parallel and orthogonal) of dipole antenna.
- Coupling loss values are given with a tolerance of +5 dB and longitudinal loss values with a tolerance of +5%. - Measured values below nominal are better. They are not limited by any tolerance-range.
- In case of a conflict of operational and stop band, please contact RFS for further assistance.
- As with any radiating cable, the performance in building or tunnel environments may deviate from figures based on free space method.
